

**Paul Shorey** | [hello@paulshorey.com](mailto:hello@paulshorey.com) | Portfolio/GitHub: <http://paulshorey.com>

Software Engineer | ES6 | NodeJS | Bash | React/Vue/Angular | APIs | UI dev/design

03/2020 - 12/2020 (remote)

### **Self Employed - Full Stack / Front End** (please visit: [paulshorey.com](http://paulshorey.com))

Took a sabbatical to upgrade my back-end and database skills. Made some proof of concepts.

- Built text-analysis tools and APIs for domain registrars, hosting, chatbot and AI companies.
- Published web apps and NPM plugins. Worked with SSR (server-side rendering) SPA apps.

Used regularly: PostgreSQL, Gatsby, Bash programming for Linux, Puppeteer, OpenAPI, ES6/ES7  
Started, and planning to work more with: Next.js, GraphQL, Elasticsearch, IndexedDB, Typescript

03/2018 - 03/2020 (Glendale, CA)

### **Beyond Limits - Software Engineer** ([beyond.ai](http://beyond.ai))

Fast growing AI company building web based applications to automate the energy industry.  
Ambitious deadlines and turnaround times - great practice working in an agency environment, communicating effectively, and architecting apps to be easily refactored. Learned a lot!

- Worked with data scientists and back-end. Big data. Exposed to Python/GoLang/PostgreSQL
- Visualized a lot of data using D3, React, Plotly, HighCharts, and custom written vanilla JS
- Built apps with React + Redux, Vue.js, Angular 8, webpack, GIT, Jest unit testing, Bootstrap
- Also used Docker, Jira/Confluence, and a lot of data manipulation with plain ES6 JavaScript

12/2016 - 11/2017 (Draper, UT)

### **Luxul - Front End Engineer and UI Designer**

Architected modern responsive microservices software to complement their award-winning hardware.

- Designed a mobile-first UX with Google's Material UI to fit the company's branding and mission
- Developed mobile-friendly admin dashboard apps to configure WiFi routers and more advanced networking devices such as switches and power bricks
- Used MobX, Webpack, Jest unit testing, Styled Components, and JSON-RPC communication
- Recruited junior developers, attended trade conferences, worked with marketing team

03/2015 - 03/2016 (NYC)

### **YouNow.com - Javascript Front End Engineer**

Glad to have been a part of this very cool live-streaming video social network talented dev team.

- Helped to gamify and extend the video player and live chat, using AngularJS
- Managed live data, websockets, video feeds, multiple API endpoints. Jasmine unit testing
- We used Agile/Scrum to move fast, and Jira to coordinate tasks between team members
- A/B testing, internationalization, Stripe payment processing, full-screen custom video player

10/2009 - 03/2014 (remote)

### **FocusFeatures.com - Lead Web Developer**

An enterprise website for Indie Film enthusiasts and professionals. Visited by 1M+ monthly.

- Led development on a small team, collaborated with marketing, helped with design.
- Developed a modular web templating framework that was integrated with a custom CMS
- Built Google TV enabled service for smart televisions, controlled with only a remote
- Built responsive, pixel-perfect web pages and apps to feature articles/videos/slideshows

Looking for a full-stack or front-end role. Comfortable with both. Worked remotely before and prefer it.

**BFA Media Arts** - Graduated 2009 from Hartford Art School in West Hartford, CT

Plus, countless online tutorials, ebooks, reference guides, YouTube videos, podcasts, and Github forks.

**Coming from a design background**, I love to create beautiful user-friendly responsive products. Love using programming to create something that does not exist - new and innovative solutions.

I haven't considered myself a "software engineer" until recently. **Looking back at my past however, I've been a software engineer from day one.** The first thing I developed was actually a full-featured content management platform. Not satisfied with the clunky awkward Wordpress/Drupal/Joomla back in 2008 (the interface was terrible), I learned PHP and MySQL in my senior year of college, and built a CMS with a much better and easier UI.

I used that to automate and build websites for local artists and businesses, focusing more on design. At Focus Features Films, I developed mini-sites for each new feature film. That was a dream job. **I collaborated remotely with a small team from 2009-2014.** That was mostly jQuery. Since then, I've explored different industries, and gathered experience building modern applications, using React and Angular. I also really like Vue.js. They're all great! Now finally feeling comfortable with it all, getting pretty good, but there is always so much more to learn! It's no longer overwhelming, but empowering.

**Looking for another remote job.** I work best in my own home office, with no distractions of a busy corporate space, everyone yelling across the room. Looking forward to pair-programming via screen-sharing, virtual meetings with multiple monitors at my desk, and sending ideas back and forth on Slack and in pull requests. I miss code reviews. It drives personal and team innovation - reading a team-mate's code, discussing it, and learning from it.

### **Summary of technologies I've worked with:**

Front-end:

React, Redux, ES6+, Styled-Components, SCSS, Responsive design, mobile first, design, Vanilla JS, NPM modules, DOM manipulation, REST/CRUD, MobX, RxJS, Jest unit testing, Typescript, GraphQL, Vue.js, AngularJS, Angular 2-10, SVG animation, icon fonts, browser extensions, JS Docs, Markdown

Back-end:

Node.js, ES modules, RegExp, Bash, CLI, GIT, SSH, Linux, functional testing, data mining, Apache server, PHP, PostgreSQL, MySQL, Elasticsearch, MVC, API development, AVA unit testing, JSON

### **Personal interests:**

When not in front of the computer screen, I'm usually building something in the garage. I've developed a one of a kind hydroponic vertical gardening system for the kitchen, where my wife and I grow microgreens. We harvest them fresh as needed, every day. I enjoy building LED lighting systems and custom lamps. I keep saying I'll make more fine art, but never get around to it. Currently taking a break from hang-gliding, skiing, and other mountain adventure sports to focus 150% on tech and web development.

Most recently, created [Wordio.co](#) a thesaurus for cultural sensitivity, positivity, and natural language generation. Worked with my wife ([about us](#)). I used it to build a domain name phrase text generator [Besta.domains](#). That was an amazing learning experience. Very humbling and inspiring process.

Putting this on hold for now. Will continue as a side project.

Senior Software Engineer

labelbox - view on jobs.lever.co

About Labelbox

Labelbox is building software infrastructure for industrial data science teams to do data labeling for the training of neural networks. When we build software, we take for granted the existence of collaborative tools to write and debug code. The machine learning workflow has no standard tooling for labeling data, storing it, debugging models and then continually improving model accuracy. Enter Labelbox. Labelbox's vision is to become the default software for data scientists to manage data and train neural networks in the same way that GitHub or text editors are defaults for software engineers.

Current Labelbox customers include American Family Insurance, Lyft, Airbus, Genius Sports, Keeptruckin and more. Labelbox is venture backed by Andreessen Horowitz, Gradient Ventures (Google's AI-focused venture fund), Kleiner Perkins, and First Round Capital and has been featured in Tech Crunch, Web Summit and Forbes.

We are looking for a Senior Fullstack Engineer, with a Frontend focus to join the Perception Team. The team's mission is to build the most efficient tool for machine learning and computer vision teams to turn assets into high quality training data. Our customers use what we create to make breakthroughs in their fields and industries, and advance artificial intelligence. We will do this by building a tool that the customer can depend on and enjoy using with problem-focused craftsmanship, rooted in our customers.

Our team specializes in processing all kinds of multimedia assets and developing innovative, reliable, and desirable annotation editors - all through a performant, efficient, and beautifully designed browser interface served to a globally-scaled workforce. As a team, we develop all over the stack and system, but our most critical expertise lies in our experience and proficiency with modern browser and graphics technologies.

What We Value

You have a track record of delivering complex, cross-functional projects.

You are able to balance owning and delegating technical design decisions and make tradeoffs to move quickly while producing quality code.

You care deeply about building a highly reliable and desirable tool for our customers. To do so, you apply a constant and committed approach to learning and growing in your art.

You believe in applying your craft to practical problems and value having a meaningful impact in an exciting, growing field.

You thrive in a remote-first environment and can be relied on to strike a balance between focused, individual effort and effective collaboration. You are able to communicate clearly and concisely on technical problems and solutions across a variety of mediums.

You are excited to be part of a strong culture that promotes inclusive collaboration and fierce trust in each other.

You deeply value working on such a team and see yourself actively contributing to the culture, practices, and standards of the team.

Who You Are

## Open-Source projects:

**npm i colorful-console-logger** Universal console.log replacement. Adds colors, trace, integrates with cloud-logging like LogDNA.

**npm i @twodashes/universal** Started a utility JavaScript library like lodash. For data manipulation, filtering, sorting, text-analysis, requests, promises, error handling. Also **@twodashes/browser** for platform-specific functions like AJAX, URL, resolution, etc.

**Browser extension** to close popups, cookie/terms consent banners, floating advertisements, newsletter promotions, etc. Works reliably without breaking the page, unlike others I've tried. Does not trigger news sites' ad-blocker blocker. Finally, browse in peace. Try it.

**Research portal** - Search using Regular Expressions. Job ad aggregator. Can be adapted to any other type of content like news, events, academic and legal articles. Next iteration would perform RegExp search in Elasticsearch instead of in React.

**Dev notes** - Few years of JavaScript programming notes. When I come across an interesting issue, I try to document it for myself and others. Now starting to organize the notes and convert into "how to" articles.

**Flexible horizontal carousel** - Image carousels you see here. Made because I could not find any script out there which would easily support variable-width content. No dependencies.

## 2018-2020 - Beyond Limits:
